Reference: Confirmation of consultancy services - Mr. Parthiv Rajesh

This is to confirm that Mr. Parthiv Rajesh provided bioinformatics consultancy services to Bio-Med X GmbH, Heidelberg, Germany, as an independent consultant from July 1, 2026 to September 30, 2026. The services were rendered under a consultancy agreement on a project basis; Mr. Rajesh performed the consultancy services remotely from Bengaluru, India.

The services supported BioMed X's research team, which develops an AI-driven platform integrating structural modelling, machine learning and experimental validation to guide the rational design of bispecific antibodies, in collaboration with a pharmaceutical partner. Mr. Rajesh's services were commissioned during the early phase of the project and concerned the curation and computational analysis of protein and antibody structural data. The scope of the services comprised:

- Mapping the public and internal antibody data sources available to the project, and preparing the documentation presented to the project's industrial partner at three successive technical meetings
- Comparing state-of-the-art protein structure prediction models for antibody–antigen modelling on published accuracy, compute cost and licensing, checking each reported figure against the original publication
- Proposing a data management approach to connect the project's computational and experimental work, so that each design could be traced through to its experimental results
- Reviewing the protein design literature in support of the project's design strategy

Mr. Rajesh delivered his work to a high standard and liaised effectively with the computational and experimental scientists on the project; his contributions were well received by the project team and in its presentations to its partner.

We wish him every success in his future endeavours.

Best regards,
Dr. Paula WAGNER EGEA
